C. J. SWENSON  
DOWNER MULLEN, SECRETARY

August 23, 1924

Warden J. J. Sullivan,  
Institution,

Dear Sir:

Regarding Max Mason No. 6785 whose name appears on the Parole calander for the month of September, I beg to report, that since received he has been under treatment for Syphilis, responded to treatment and his blood Wasserman was negative in October 1922 also in October 1923. In checking over our Syphilitics recently and taking another Wasserman we find that Max Mason gave a positive reaction this month and he is now under treatment again and is doing well. This man has a large ventral hernia in the upper left abdominal quadrant, the result of a knife wound in 1914. This necessitates that he wear a special appliance and we have fitted him with two since he was received at this institution and he works every day. Never used alcoholics. Smokes tobacco. Never had the advantage of an education, although he can read and write. Mental condition fair.

Yours respectfully,

G.A. Newman

  
Prison Physician.
